

Tone“O“Matic Series 2500

Dear Friends, Luthiers and Business Partners,

after the great success of our 2500 Series we decided to bring out an additional model that fits perfectly on ABR equipped Vintage Guitars, like a „1956 or 1959 LP“! It calls „2500 RE“ and will be available in October 2011.

Basic Features

Choose your favourite 2500 Model!

- Sophisticated tone, rich harmonics & extended sustain
- Milled from solid Bell Brass (body, saddles, wheels, bushings) & solid carbon steel (studs & screws)
- An excellent replacement for your guitar
- A great combo with an ABM 3020 or 3020a Stop-Tailpiece

#2500:

„Vintage look for „Nashville“ LP’s“

ABR-Style, stud spacing (74 - 74,50 mm) for „Nashville-Posts“, (3,6 to 4,30 mm studs). Including studs & bushing (4mm to M5/M5).

#2500-RE:

„Perfect ABR-1 Replacement for Vintage Guitars, like a „1959“, Custom Shop or Vintage Reissue...

ABR-Vintage-Style, (73,66 to 73,81mm stud spacing, for 3,6 - 4mm studs. Comes with M4/30mm steel studs & knurled brass wheels.

#2504:

„Nashville-Type“ like on an actual „LP-Standard“ or „LP-Studio“ (74 to 74,50 mm stud spacing, for 3,6 to 4,30 mm studs), Shipment with steel studs with brass wheels (4mm to M5) & M5 brass bushings.

#2506:

„Perfect Sound Replacement for „Asian-Type LP’s“

(74 to 74,5mm stud spacing, for 5,8 to 6,30 mm studs). Includes steel studs (6mm to M8) & M8 bushings (11mm outside diameter).

#2548: 4mm to M8 Adapter: For mounting an ABM 2504 to an „Asian-Type LP“

Converts a 4mm head to a M8 threaded bolt (asian big stud).

Metallic Plating:

Nickel (N), Chrome (C), 24-K Gold (G), „StoneAge“ Nickel (N Aged), „GoldenAge“ (G Aged), Black Chrome (B).

Custom made finishes: Black Matt (BM) & Chrome Matt (CM)

Please add the referring short cut after the bridge model number

Locking Function (Option-L): Not available in the USA (the bridge sounds much better unlocked!).

Please add an „-L“ for ordering in Europe or Asia

Product Code Example:

2500N-L = Model 2500 with Nickel Plating and Locking Function

Inch vs Metric Gauges:-)

1 Inch = 2,54cm = 25,40mm

„Precision & Imprecision“:

We build the bridges suitable for all important dimensions. But imprecision in stud spacing of a specific guitar may appear, mostly found on ABR-1 based vintage instruments with the „direct to wood“ stud construction. Sometimes these pins are mounted with a bad angle, so a varying spacing beneath the standard will occur. If an ABM bridge will not fit, it will be a matter of a wrong chosen model or an incompatible guitar.

We found out, that the bridge body must have space to resonate for best sound (without using the locking function or just slightly locked). On the other hand the precise milled saddles with their perfect fit provide a great tuning stability, long lasting intonation and superb sustain. So form & function follow your ears!
